

GLUCOLYTE

Product Of France

Composition Per Kg

Dextrose:	482 000 mg .
Sorbitol:.....	100 000 mg.
Calcium Gluconate:.....	3000 mg.
Sodium Bicarbonate:.....	287 000 mg.
Potassium Chloride:.....	20 000 mg.
Potassium Phosphate:.....	40 000 mg

INDICATIONS:

Treatment of dehydration, Diarrheas, Fever diseases.
As an aid in the supportive treatment of dehydration or electrolyte imbalance due to coccidiosis, Scours, Enteritis, Pasteurellosis (Shipping Fever), Pneumonia, Toxemia & Stress.
Glucolyte is formulated as an electrolyte for use during periods of extreme Temperature, before & after transportation or when the conditions interfere with the normal flock.

GLUCOLYTE

Dextrose

- ❖ It is derived from genetically modified corn using GMO enzymes.
- ❖ It has a highly glycemic index used to replace lost fluids in body dehydration.

Sorbitol

- ❖ Also known as glucitol is a non-volatile Polyhydrate Sugar Alcohol, chemically stable and water soluble.
- ❖ It works by retaining fluid in the intestine which helps to increase muscle movements.

Calcium Gluconate

- ❖ A mineral supplement used for bone formulation.
- ❖ It is used in the removal of extra minerals from the body after binding as Phosphate.
- ❖ A best antidote for Magnesium Sulphate toxicity.

Sodium Bicarbonate

- ❖ A fine crystalline chemical used as an antacid.
- ❖ It is highly effective to regulate metabolism, acid base balance, strengthen physical and increase immunity by exchanging Phosphate activity.
- ❖ It increases egg production.

Potassium Chloride

- ❖ It is a mineral needed especially for the beating of the heart.
- ❖ It is used for hypokalemia.

Potassium Sulphate

- ❖ A water-soluble salt used for body homeostasis such as acid base equilibrium, osmotic pressure, nerve activity, and stimulation of intracellular enzymes.
- ❖ Also helps in absorption and transportation of glucose and amino acids.

Storage:

- ❖ Keep well sealed in a cool, dry place and protected from direct sunlight.

Dosage And Administration:

- ❖ Glucolyte must be administered via drinking water at the rate of 1gm/4liters of drinking water.
